What is the range of magnitudes for

Chapter 6 Earthquakes Practice Exam and Study Guide

First-motion studies. Seismic data can also be used to determine in which direction rocks first moved along a fault during an earthquake. These first-motion studies indicate if the first rock motion was a push (the rock moved toward the seismograph station) or a pull (the rock moved away from the station).

Monitoring Earthquakes - CliffsNotes Study Guides

Read Book Earthquakes Guided And Study Answer Key

An earthquake is caused by stress along a fault. Stress increases until the rocks break and release stored energy. • The place where rocks break and cause an earthquake is called the focus (FOHkus). The point on the surface directly above the focus is called the epicenter (EPuh sen tur).

Earthquakes and Seismic Waves

An earthquake is a sudden shaking of the surface of the earth by the passage of the seismic waves through Earth's rocks. It is also known as tremblor, tremor or quake.

Earthquake: Causes, Effects and Magnitude measurement

Scientists can guess when an earthquake will happen by looking at how many have happened in the past. For example, if only a few strong earthquakes have happened recently in an earthquake zone, scientists can guess that a strong earthquake will happen there soon. What Is the Gap
