placenta. organ that attaches embryo to uterus. fallopian tube. (oviduct) carries eggs to uterus. endometrium. the inner lining of the uterus in mammals; produce maternal part of placenta and nourishes embryo. umbilical cord. tube from baby to placenta; carries 3 blood vessels ; nourishment-gets rid of waste. amnion.

Biology-a mammal embryo Flashcards | Quizlet

mammals have evolved amniotic eggs in which an embryo can develop outside its mother's body, and out of water, without drying out. Mammals have various reproductive adaptations. But all mammalian young are nourished by milk produced by the mother's mammary glands.

A Mammal Embryo Worksheet Answers

In mammals, the blastula forms the blastocyst in the next stage of development. Here the cells in the blastula arrange themselves in two layers: the inner cell mass, and an outer layer called the trophoblast. The inner cell mass is also known as the embryoblast and this mass of cells will go on to form the embryo.

The endodermal cells continue through the interior of the embryo until they reach the other side, creating a continuous tract through the embryo; this tract is the archenteron, or embryonic gut. In protostomes, the blastopore becomes the embryo's mouth; in deuterostomes, the blastopore becomes the embryo's anus.

Embryo, the early developmental stage of an animal while it is in the egg or within the uterus of the mother. In humans the term is applied to the unborn child until the end of the seventh week following conception; from the eighth week the unborn child is called a fetus. A brief treatment of

Embryo | human and animal | Britannica

A more detailed version of the stages of mammalian embryonic development is below. E#. # represents the very defined embryonic stage of "days post fertilization" where E1 would indicate 1 day after fertilization. (Marikawa, 2006) Something to keep in mind is that while mouse and human development are similar, the timescale is rather different between the two-humans take longer to develop ...

Chapter 32 - An Introduction to Animal Diversity | CourseNotes

Embryo Definition. An embryo refers to the early developmental stage of eukaryotic organisms following the fertilization of an egg (derived from a female) by sperm (derived from a male) as a method of sexual reproduction. In animals, the initial diploid cell that results from the fusion of the egg and the sperm contains half the genetic information (DNA) from each of the parental cells and is ...

Embryo - Definition, Development ... - Biology Dictionary

A mammalian embryo, just prior to implantation, consisting of a hollow ball of cells surrounding a smaller clump of cells known as the inner cell mass. The blastocyst is the source material to derive embryonic stem (ES), trophoblast stem (TS), and extraembryonic endoderm (XEN) cell lines.
