Unconformity. gaps in the geologic rock record. rock layers missing in a sequence. Erosional surface. transport of materials by natural agents. subsidence. caving or sinking of land.

Earth science- sequence of events Flashcards | Quizlet

Single-celled organisms consumed the sun's energy. As a waste product, this cyanobacteria eventually filled the oceans and atmosphere with oxygen. Next, an oxygenated atmosphere paved the way for more complex life forms to exist. At about 100,000,000 years ago, dinosaurs roamed the Earth until their abrupt extinction.

GEOLOGY: EARTH'S HISTORY Use the links below to explore available resources covering major concepts associated with the study of the history of the Earth. Resources in this section pertain to the formation and evolution of the Earth and how it has been discovered through the relative and absolute dating of rocks and fossils.

Regents Earth Science Resources: Geologic History

Steno's and Smith's principles are essential for determining the relative ages of rocks and rock layers. In the process of relative dating, scientists do not determine the exact age of a fossil or rock but look at a sequence of rocks to try to decipher the times that an event occurred relative to the other events represented in that sequence.

Relative Ages of Rocks | Earth Science

This Sequence of Events Practice 3-Rock Layers Worksheet is suitable for 7th - 10th Grade. In this rock layer worksheet, students are given a diagram showing a pattern of rock layers from oldest to youngest. Students list the sequence of events that occurred in order to form the pattern shown.
