Tension Membrane Design Link to further information on Tension and Tensile Membrane Structure Design. Engineering of fabric membranes requires expertise in two primary areas; in the conceptual design and analysis of stressed skin structures and in the use of advanced geometry manipulation in the manufacture of the built form.

Tension and Tensile Membrane Structure Design

The structural analysis software RFEM allows for form-finding, structural analysis, and determination of cutting patterns of tensile membrane and cable structures. The calculation is performed according to the large deformation analysis. When determining the cutting patterns, user-defined intersection lines and compensation dimensions are considered.

Tensile Membrane Structure Design,Manufacturers And ...

Tensile Fabric Structures Tensile membrane structures are unusual in that the stresses in the membrane are determined by the membrane shape, and vice versa. So the shape of the structure has to follow the stress path, and this leads to a shape that is often aesthetically pleasing, where form follows function.
