Researchers at U of M working to create world's 1st human organ storage bank

An international team of scientists said they created human-monkey embryos, or chimeras, to see if they could grow organs for people who need transplants.

Part human, part monkey: Scientists engineer hybrid embryo in effort to grow organs

"An important goal of experimental biology is the development of model systems that allow for the study of human diseases under in vivo conditions." This is hardly the first example of a chimeric ...

Researchers Engineer Human-Monkey Chimera Embryos

Human factors engineering focuses on making technology work for people. This brief discussion divides human factors considerations into four broad categories: perception--seeing, hearing
